SUMMARY

Software Engineer with experience at Freelancer since 2024, known for developing innovative solutions. Achievements include first place at the Sona PHP Web Hackathon for creating a service management system, and second place at an IoT Hackathon for designing a spider robot. Expertise in full-stack web development using React and Node.js, as well as mobile apps with Flutter and Dart. Skilled in IT infrastructure, network configuration, and AI-driven automation. Aiming to contribute to a forward-thinking organization, utilizing a broad skill set to tackle complex challenges and deliver impactful results.

PROFESSIONAL EXPERIENCE

CIC Holdings PLC | Software Engineering Intern **May 2026 - Present**

Software Engineer Intern

- Contributed to internal system optimization project, focusing on database management and backend integration using ASP.NET Core and Entity Framework.
- Supported the development lifecycle by participating in code reviews and documenting technical requirements.
- Streamlined data migration processes using SQL scripts,reducing manual processing time for legacy system by 20%

Computer Technician **Jan 2024 - Jan 2026**

Provide hands-on IT support, hardware repair and system configuration across Western Province; diagnose and resolve hardware and software issues, perform OS installations and maintain workstations. Install and maintain routers, switches, and local networks to ensure stable connectivity and improved uptime. Maintain asset inventory, perform preventive maintenance and manage backups to reduce downtime. Support development and deployment environments by assisting with environment setup, security basics and routine maintenance.

KEY COMPETENCIES

Languages

- Javascript, Java, PHP, C, C#, Python
- Asp.net , React, TypeScript, Dart

Database Technologies

- SQL
- MYSQL
- Mongo DB
- Firebase

Framework

- React
- Bootstrap & Tailwind CSS
- Three.js
- ASP.NET Web Forms
- Electron.js
- Hibernate (ORM)

IDEs Familiar with

- Visual Studio
- Visual Studio Code
- Android Studio
- NetBeans
- InteliJ

Tools & DevOps

- Google Cloud Console
- AWS
- ClickUP
- Git/GitHub
- CI/CD

PROJECTS

- **Medical Rep Mobile Application CIC Holdings**

  A web-based Medical Representative Management System developed using ASP.NET and C#, designed to streamline field operations and daily activities of medical representatives. Contributed to the development and enhancement of key internal features, including daily task creation and management, promotion event tracking with an interactive event calendar, dashboard updates, and activity monitoring functionalities. The system supports efficient management of medical representatives' work plans, doctor visits, product promotions, sample distribution, and daily activity reporting.

- **Regulatory System CIC Holdings**

  A web-based Regulatory Management System developed using ASP.NET and C#, designed to streamline and efficiently manage regulatory processes within the organization. Contributed to the development and enhancement of dashboards with role-based access control, enabling users to access information based on their assigned roles and responsibilities. Implemented a notification feature with JavaScript-based toast messages to provide users with real-time system updates and alerts. Enhanced the user management functionality and developed multiple internal features and system improvements to support operational requirements and improve overall system usability.

- **GameVault (E-Commerce Game Store):**

  An interactive online game store platform built utilizing Java and Hibernate. The project involved end-to-end development, from drafting detailed software requirements to implementing robust backend architecture and integrating the PayHere payment gateway for secure user transactions.

- **OnlineStore (E-Commerce Web Application):**

  An interactive online game store platform built utilizing Java and Hibernate. The project involved end-to-end development, from drafting detailed software requirements to implementing robust backend architecture and integrating the PayHere payment gateway for secure user transactions.

- **Smart-Retail-POS(POS & Inventory Application):**

  A modern, web-based retail management solution engineered with React to optimize checkout workflows. The frontend features a highly responsive and intuitive UI styled with Tailwind CSS, designed for rapid transaction processing. The system seamlessly communicates with a Node.js/Express backend via REST APIs to manage real-time inventory updates, user authentication, and sales reporting.

- **Warehouse Distance Tracker**

  A logistics optimization system designed to calculate precise distances between customer locations and Rocell warehouses. The project integrates mapping technologies [Google Maps API / Mapbox] to streamline delivery routing and improve operational efficiency. Developed using [React, Node.js, and MySQL], the platform provides real-time distance metrics to assist in accurate delivery planning and cost estimation.

EDUCATION & CERTIFICATIONS

BSc.(Hons) Software Engineering
Majors: Software Engineering
Birmingham City University
Expect Graduation 2027

Bachelor of Information Technology
University Of Moratuwa
Expect Graduation 2028

EXTRACURRICULAR ACTIVITIES

1st Place, Sona PHP Web Hackathon
Java Institute For Advance Technology, Colombo , 2023
●*Project: LocalLink – Distance Service Management System*

2nd Place, IoT Hackathon
Java Institute For Advance Technology, Colombo | 2025
●*Project: Spider Wick – Spider Robot*
